

## **Problem Statement:**

Analyze the Retail Purchase data set and implement the KPI's as defined below:

- 1. Calculate sales breakdown by product category across all of the stores.
- 2. Calculate sales breakdown by store across all of the stores (handle bad records)
- 3. Find the total sales values across all the stores and the total number of sales. Assume there is only one reducer.

## Sample Input Data:

| Date       | Time  | City       | Product-Cat      | Sale-Va | lue     | Payment-Mode |
|------------|-------|------------|------------------|---------|---------|--------------|
| 2012-01-01 | 09:00 | Fort Worth | Women's Cloth    |         |         | •            |
| 2012-01-01 | 09:00 | San Jose   | Men's Clothing   | 214.05  | Amex    |              |
| 2012-01-01 | 09:00 | San Diego  | Music 66.08      | Cash    |         |              |
| 2012-01-01 | 09:00 | Pittsburgh | Pet Supplies     | 493.51  | Discove | er           |
| 2012-01-01 | 09:00 | Omaha      | Children's Cloth | ning    | 235.63  | MasterCard   |
| 2012-01-01 | 09:00 | Stockton   | Men's Clothing   | 247.18  | Master  | Card         |
| 2012-01-01 | 09:00 | San Diego  | Cameras          | 379.6   | Visa    |              |
| 2012-01-01 | 09:00 | New York   | Consumer Elec    | tronics | 296.8   | Cash         |
